## Detailed Description

### Detailed Description

... inhibit widespread copying of such applications.

The system presented relies on the fact that a reasonable proportion of the computer graphics application, in particular a \*computer\* \*game\*, is static texture data which is prepared during the applications development. To protect the application, the standard 3D rendering hardware system is modified in five...27 is to securely combine the DevID, the AEK, and one of several secret keys embedded inside the rendering chips to produce a sales key,, \*SAK\*, which is specific to the pairing of that application and the target rendering device. The final step 28 is to download the entire application data, including its textures encrypted with the AEK, to the target device, along with the \*SAK\*, and an index for the secret key that was ...serial/identification number and in return supply a Sales Key. This key The run-time rendering phase 22 requires that the a plication supplies the \*SAK\* and the internal secret P

...hardware 29. The rendering hardware reverses 30 the combination steps 27 applied in the point of sale phase by using the internal key, DevID and \*SAK\* to retrieve the AEK. During rendering 31 the protected textures are decrypted on-the-fly using the AEK. In a preferred embodiment of the...in the sales tool and the private key would be embedded within the rendering hardware.

The encrypted result 55 is used as the sales key, \*SAK\*, which is exported with a copy of the application.  
SUBSTITUTE SHEET (RULE 26)

- 12

Figure 5 illustrates the modifications that are made to the rendering unit 4 that was originally described in figure 1b. The modified unit contains a Key Production Unit 30 that accepts the Sales Key, \*SAK\*, and the identifier for the internal secret key, and reverses the steps described in
